OBJECTIVES OF THE PRESENTATION

01

Aims for Corporate Decision-Making

The presentation will highlight how revenue management insights aid corporate leaders in making informed decisions that drive revenue growth and operational efficiency in hotels.

02

POWER BI FUNDAMENTALS

WHAT IS POWER BI?

01

Features and Capabilities

Power BI is a robust business analytics tool that provides interactive visualizations, dashboards, and reports, enabling users to transform raw data into meaningful insights seamlessly.

02

Comparing Power BI with Other Tools

Power BI is often compared to tools like Tableau and Qlik for its ease of use, cost- effectiveness, and robust data modeling capabilities, which cater to both novice and advanced users.

DATA CONNECTIVITY IN POWER BI

Importing Hotel Data Sources

This section outlines the steps to connect Power BI with various hotel management systems, including the specifics of importing data from Excel, SQL databases, and online services.

Direct Query vs. Import Mode

Direct Query allows real-time data access from the source while Import Mode loads a snapshot of the data, impacting performance and report refresh capabilities differently.

DATA MODELING FOR HOTEL REVENUE ANALYSIS

STRUCTURING DATA FOR ANALYSIS

Handling Table Relationships

Establishing relationships between tables, such as linking reservations with customer details, is crucial for accurate reporting and analysis of hotel performance over time.

Understanding Star Schema

The star schema is a data modeling technique that organizes data into fact and dimension tables, facilitating efficient retrieval and analysis of hotel revenue data to maximize insights.

CREATING MEASURES AND CALCULATED COLUMNS

Key Measures for Revenue Analysis

Identifying key measures, such as average daily rate and revenue per available room, provides essential metrics for evaluating hotel financial performance and trends.

01

DAX Functions for Financial Metrics

Data Analysis Expressions (DAX) functions enable dynamic calculations and aggregations of financial metrics, allowing for real-time analysis and reporting in hotel revenue management.
